

# CREATE MORE CAPACITY

at your next congress

If your congress venue does not have the capacity needed in terms of a large enough plenary room, or more rooms are needed for the break-out sessions and lectures; ACS offers the perfect and proven solution.

ACS can construct temporary congress rooms at any venue; exhibition hall, foyer or stadium. We are based in Holland, and operate across Europe as the preferred supplier to some of the largest and most respected international associations, conference organisers and congress centres.

The largest capacity plenary room to-date was built for 10,000 attendees, and 26 separate temporary lecture rooms were constructed at one congress venue. Each room (large and small) is fully equipped and operational with lighting, curtains, carpets, chairs, podium, audio-visual equipment: large screens above the main platform, microphones and presenter screens. Special curtains are used in each room to sound proof against noise escaping or entering. ACS also styles the rooms as required, to create the appropriate atmosphere for the event.

For international gatherings where multiple languages are spoken, ACS can provide translation facilities, with the excellent audio quality of the Bosch Integrus system, which supports up to 32 simultaneous language transmissions at one time. When more audience participation is required, ACS can work with you to create an interactive voting system, which allows you to engage with up to 5,000 delegates at one session.

*Dedicated to your performance* is the promise from ACS, and to find out how we can help you at your next congress please send us a mail or call us direct.
